White Paper No. 006

THE REPARATIONS INFRASTRUCTURE PLATFORM

Building Practical Infrastructure for the Global Reparations Movement

Purpose

This paper introduces the concept of the Reparations Infrastructure Platform (RIP). It describes a long-term vision for developing practical digital and organisational infrastructure to support the global reparations movement.

Why Infrastructure?

Many organisations already campaign for reparatory justice. The Platform is intended to complement those efforts by providing practical tools, shared resources and long-term institutional support.

Core Components

The Platform is envisioned as an integrated framework that may include digital identity systems, evidence and incident recording, research databases, educational resources, document libraries, AI-assisted knowledge tools, governance systems, supporter management and international collaboration tools.

Supporting Organisations

The Platform is designed to assist community organisations, researchers, legal practitioners, educators and other participants by providing common infrastructure that encourages cooperation while allowing each organisation to remain independent.

Long-Term Vision

Our ambition is to establish one of the world's leading practical infrastructures dedicated to supporting reparatory justice. The Platform will evolve through consultation, research, technology development and international partnerships.

Conclusion

The Reparations Infrastructure Platform represents the practical foundation of the proposed International Centre for Reparatory Justice. By combining technology, governance, education and research, it seeks to provide lasting infrastructure capable of supporting future generations.
